Profile

I'm a hard working college student from Branchland, West Virginia. When I was a teenage I fell in love with programming, specifically Java. I would use my skill in Java to program video game mods. With these mods I dipped my toes in web development and databases. I had a rocky start after high school, but now I'm a Freshman at Southern New Hampshire University and work in a steel fabrication shop. I'm ready to finally start my career and my future.

Experience

LABORER, STEELS SPECIALTIES; POINT PLEASANT, WV 2018 - PRESENT

As a laborer at Steel Specialties I do a little bit of everything. I go from helping welders and builders to sand blasting and using an industrial saw. Here I have a heavy workload and often have to use large equipment that I was shortly trained on. I have to be a quick learner in order to accomplish my goals.

SEASONAL PACKAGE HANDLER, UPS; HUNTINGTON, WV 2017-2018

Package Handler at UPS was my first significant job after High School. I would carefully, but swiftly, load trailers with packages. It was hard work, but I made the best of it. Being a seasonal worker I slowly see all my peers leaving as my managers started cutting us off. However my managers actually wanted to keep me because of my hard work, but I had to decline their offer because I couldn't wait for them to have an opening.

Education

University of State, City, State – Degree, Year

Southern New Hampshire University, Manchester, NH - Associates Degree in Computer Science, 2022

Skills

I've been learning and working with Java ever since I was a teenager. I also have experience in MySQL, HTML, Python, and Redis. The tools I often use has been Visual Studio Code and JetBrains IntelliJ IDEA.
